PARTNER TOOLKIT

Welcome!

Healthy Drinks, Healthy Kids Communications Toolkit for Partner Organizations

Thank you for your support in spreading the word about healthy drinks for healthy kids! With your help, we can make sure parents, caregivers, health and child care professionals, policymakers and others have the latest information on what kinds of beverages, how much of them, and at what ages are best for the healthy growth and development of children five and under.

In this toolkit, you will find a wide array of turnkey resources to share these recommendations with your network. And if there are other materials or support you need to share the recommendations, we are happy to work with you to create it! Just get in touch with [Riley Greene](#) at riley@bettyandsmith.com.

All of the materials in this toolkit can be found online at HealthyDrinksHealthyKids.org/partners.

Healthy Beverage Recommendations: Children 0-5

Core Language

Research shows that what children drink – from birth through age 5 – can have a big impact on their health. With so many choices, it can be confusing to know which drinks are healthy and which ones to avoid. That’s why some of the nation’s leading experts on children’s health came together to develop recommendations to help parents choose what’s best for their kids. Whether it is a question about milk, juice, water, or other drinks, these new recommendations clear up the confusion and help parents and caregivers set their kids on the path for healthy growth and development.

These recommendations were developed by experts at the Academy of Nutrition and Dietetics (AND), the American Academy of Pediatrics (AAP), the American Academy of Pediatric Dentistry (AAPD), and the American Heart Association (AHA) under the leadership of Healthy Eating Research (HER), a leading nutrition research organization, and with funding from the Robert Wood Johnson Foundation. While every child is different, the nation’s leading health organizations agree that for most kids, the following recommendations can help to set children on a path for healthy growth and development. As always, consult with your health care provider about your child’s individual needs.

0-6 months: Babies need only breast milk or infant formula to get enough fluids and proper nutrition.

6-12 months: In addition to breast milk or infant formula, offer a small amount of drinking water once solid foods are introduced to help babies get familiar with the taste – just a few sips at meal times is all it takes. It’s best for children under 1 not to drink juice. Even 100% fruit juice offers no nutritional benefits over whole fruit.

12-24 months: It’s time to add whole milk, which has many essential nutrients, along with plain drinking water for hydration. A small amount of juice is ok, but make sure it’s 100% fruit juice to avoid added sugar. Better yet, serve small pieces of real fruit, which are more nutritious and satisfying.

2-5 years: Milk and water are the go-to beverages. Look for milks with less fat than whole milk, like skim (non-fat) or low-fat (1%). If you choose to serve 100% fruit juice, stick to a small amount, and remember adding water can make a little go a long way!

All children 5 and under should avoid drinking flavored milks (e.g., chocolate, strawberry), toddler formulas, plant-based/non-dairy milks (e.g., almond, rice, oat)*, caffeinated beverages (e.g., soda, coffee, tea, energy drinks) and sugar- and low-calorie sweetened beverages (e.g., “diet” or “light” drinks, including those sweetened with stevia or sucralose), as these beverages can be big sources of added sugars in young children’s diets and provide no unique nutritional value beyond eating a balanced diet and sticking to water and milk.

**Notes: Evidence indicates that, with the exception of fortified soy milk, many plant-based/non-dairy milk alternatives lack key nutrients found in cow’s milk. Our bodies may not absorb nutrients in these milks as well as they can from dairy milk. Unsweetened and fortified non-dairy milks may be a good choice if a child is allergic to dairy milk, lactose intolerant, or whose family has made specific dietary choices such as abstaining from animal products. Be sure to consult with your health care provider when choosing a plant-based/non-dairy milk. It’s important to ensure that your child’s overall diet has the right amount of the key nutrients found in milk, such as protein, calcium, and vitamin D, which are essential for healthy growth and development.*

Talking Points

As a health or child care professional, you are a trusted resource for parents and caregivers when it comes to the health and well-being of their kids. You can find downloadable materials to share with the parents and caregivers you work with at HealthyDrinksHealthyKids.org/professionals. To support your conversations about these new recommendations, we've included the following talking points:

1. We know that what kids drink in the early years of life is just as important as what they eat for healthy growth and development.
2. Making healthy drink choices is important both for being healthy now, as well as developing healthy habits down the road.
3. Now, for the first time, there are consistent recommendations from leading health and nutrition organizations in the United States about what kinds of beverages are healthy for kids as they grow, from ages zero through five.
4. These recommendations are needed because right now many children are not drinking what they should. And there is no comprehensive and consistent guidance for parents, caregivers, health professionals and policymakers.
5. They include guidance on how much and what kinds of different drinks help kids get adequate nutrition and hydration at different ages.
6. The top level guidance includes:
 - **0–6 months:** Babies need only breast milk or infant formula to get enough fluids and proper nutrition.
 - **6–12 months:** In addition to breast milk or infant formula, offer a small amount of drinking water once solid foods are introduced to help babies get familiar with the taste – just a few sips at meal times is all it takes. It's best for children under 1 not to drink juice. Even 100% fruit juice offers no nutritional benefits over whole fruit.
 - **12–24 months:** It's time to add whole milk, which has many essential nutrients, along with plain drinking water for hydration. A small amount of juice is ok, but make sure it's 100% fruit juice to avoid added sugar. Better yet, serve small pieces of real fruit, which are more nutritious and satisfying.
 - **2–5 years:** Milk and water are the go-to beverages. Look for milks with less fat than whole milk, like skim (non-fat) or low-fat (1%). If you choose to serve 100% fruit juice, stick to a small amount, and remember adding water can make a little go a long way!
 - **All children five and under** should avoid drinking flavored milks (e.g., chocolate, strawberry), toddler formulas, plant-based/non-dairy milks (e.g., almond, rice, oat), caffeinated beverages (e.g., soda, coffee, tea, energy drinks) and sugar- and low-calorie sweetened beverages (e.g., “diet” or “light” drinks, including those sweetened with stevia or sucralose), as these beverages can be big sources of added sugars in young children's diets and provide no unique nutritional value beyond eating a balanced diet and sticking to water and milk.
7. More detailed information about these recommendations, different kinds of beverages, and what amounts are best at what ages can be found at HealthyDrinksHealthyKids.org.

Common Q&A

Tell me more about....

All the things to avoid

These beverages can be leading sources of added sugars in young children's diets and provide no unique nutritional value beyond eating a balanced diet and sticking to water and milk. And, avoiding these kinds of beverages at a young age can help to create and maintain healthy habits down the road.

Juice

Juice, even 100% fruit juice, can contribute to dental cavities, and if kids drink more than is recommended, it can have other negative health impacts such as weight gain. It's a better choice to serve small pieces of real fruit, which are more nutritious and satisfying.

Flavored Milk

Flavored milks, like chocolate and strawberry milks, typically have added sugars, and they don't have any nutritional benefit over plain milk. Kids under age two should avoid added sugars, and two to five year-olds already take in more added sugars than is recommended.

We know that some kids refuse to drink plain milk because they are used to the flavored kind, but here are some tips to help them drink more plain milk:

1. If your child doesn't accept plain milk at first and insists on drinking flavored milk instead, try cutting back slowly on flavored milk. Mix half flavored milk and half plain milk while your child gets used to less sugar, and gradually reduce the amount of flavored milk and increase the amount of plain milk.
2. Using a crazy straw or a cup with a special design or character that your child likes may encourage him/her to drink it. Taste buds can change, it just takes some time – keep it up! After cutting back on sugars in foods and drinks, many people find that the foods and drinks they used to like are now too sweet.

Plant-based/Non-dairy Milks

Evidence indicates that, with the exception of fortified soy milk, many plant-based/non-dairy milk alternatives lack key nutrients found in cow's milk. Our bodies may not absorb nutrients in these non-dairy milks as well as they can from dairy milk. However, unsweetened and fortified non-dairy milks may be a good choice if a child is allergic to dairy, lactose intolerant, or in a family that has made specific dietary choices such as abstaining from animal products. Is that you? Then let's work together to choose the right milk substitute. It is important to ensure that your child's overall diet has the right amounts of the key nutrients found in milk, such as protein, calcium, and vitamin D, which are essential for healthy growth and development.

What should your little one be drinking for healthy growth and development?

Infants really only need breast milk or infant formula. And from ages one to five, milk and water should be the go-to drinks! A little bit of 100% fruit juice is okay, but small pieces of real fruit are even better. Pro-tip: you can add water to make a little 100% fruit juice go a long way!

Want more healthy drink tips for kids? Go to HealthyDrinksHealthyKids.org

Did you know that eating small pieces of fruit is more nutritious and satisfying than drinking juice for little bellies?

If you serve juice, make sure it's 100% fruit juice and offer just a little (no more than 4-6 ounces/day) – and remember that you can add water to make a little go a long way!

Header: 5 Tips on Healthy Drinks for Kids!

Just because it's labeled as a "kid's drink" doesn't mean that it's actually good for kids. And with all the options out there, it can be hard to keep up with what's healthy, and not so healthy, for children. But now, there are new recommendations from some of the nation's leading experts* on children's health and nutrition about healthy drink choices, and amounts, for kids five and under. You can find the full recommendations—and fun, informative materials—at HealthyDrinksHealthyKids.org.

For now, here are 5 easy to follow tips from the experts:

[If your format allows for embedding video, a video version of these 5 pro tips lives [here](#).]

#1: Kick out beverages with added sugar... and there are a lot!

And guess what- even low-calorie sweeteners aren't recommended for young kids.

#2: Look for juices labeled as 100% juice.

And remember, a little bit can go a long way by adding water.

#3: Skip the caffeine.

Don't kids have enough energy anyway?

#4: Give the right milk for the right age.

And if cow's milk is not an option, look for *unsweetened and fortified* milk alternatives.

0-1 Year: Breast milk or Infant Formula

1-2 Years: Whole Milk

2+ Years: Fat-free (skim) or Low-fat (1%) Milk

#5: Make water the go-to drink.

Great for playtime, mealtime and anytime!

*These five pro-tips were created by [1,000 Days](#), a non-profit organization working to ensure women and children have the healthiest first 1,000 Days. They are based on recommendations developed by experts at the Academy of Nutrition and Dietetics (AND), the American Academy of Pediatrics (AAP), the American Academy of Pediatric Dentistry (AAPD), and the American Heart Association (AHA) under the leadership of Healthy Eating Research (HER), a leading nutrition research organization, and with funding from the Robert Wood Johnson Foundation.

Research shows that what young children drink can have a big impact on their health. And with all of the choices these days, it can be confusing for parents and caregivers to know which drinks are healthy and which ones to avoid. As a [health/child care] professional, you're a trusted resource for parents and caregivers when it comes to the health and well-being of their kids.

Now, there are new recommendations from some of the nation's leading health and nutrition organizations on what drinks are best for the healthy growth and development of kids ages five and under.

These recommendations were developed by experts at the Academy of Nutrition and Dietetics (AND), the American Academy of Pediatrics (AAP), the American Academy of Pediatric Dentistry (AAPD), and the American Heart Association (AHA) under the leadership of Healthy Eating Research (HER), a leading nutrition research organization, and with funding from the Robert Wood Johnson Foundation.

While every child is different, these organizations agree that for most kids, the following recommendations can help to set children on a path for healthy growth and development:

- **All children five and under** should avoid drinking flavored milks (e.g., chocolate, strawberry), toddler formulas, plant-based/non-dairy milks (e.g., almond, rice, oat)*, caffeinated beverages (e.g., soda, coffee, tea, energy drinks) and sugar- and low-calorie sweetened beverages (e.g., "diet" or "light" drinks, including those sweetened with stevia or sucralose), as these beverages can be big sources of added sugars in young children's diets and provide no unique nutritional value beyond eating a balanced diet and sticking to water and milk.
- **0–6 months:** Babies need only breast milk or infant formula to get enough fluids and proper nutrition.
- **6–12 months:** In addition to breast milk or infant formula, offer a small amount of drinking water once solid foods are introduced to help babies get familiar with the taste – just a few sips at meal times is all it takes. It's best for children under 1 not to drink juice. Even 100% fruit juice offers no nutritional benefits over whole fruit.
- **12–24 months:** It's time to add whole milk, which has many essential nutrients, along with plain drinking water for hydration. A small amount of juice is ok, but make sure it's 100% fruit juice to avoid added sugar. Better yet, serve small pieces of real fruit, which are more nutritious and satisfying.
- **2–5 years:** Milk and water are the go-to beverages. Look for milks with less fat than whole milk, like skim (non-fat) or low-fat (1%). If you choose to serve 100% fruit juice, stick to a small amount, and remember adding water can make a little go a long way!

**Notes: Evidence indicates that, with the exception of fortified soy milk, many plant-based/non-dairy milk alternatives lack key nutrients found in cow's milk. Our bodies may not absorb nutrients in these non-dairy milks as well as they can from dairy milk. Unsweetened and fortified non-dairy milks may be a good choice if a child is allergic to dairy milk, lactose intolerant, or is in a family that has made specific dietary choices such as abstaining from animal products. Be sure to consult with your health care provider to choose a plant-based/non-dairy milk. It's important to ensure that your child's overall diet has the right amounts of the key nutrients found in milk, such as protein, calcium, and vitamin D, which are essential for healthy growth and development.*

More detailed information about these different kinds of drinks and why they are or are not recommended for young children can be found in the full report. You can also find more information and resources to help share these recommendations at HealthyDrinksHealthyKids.org.

#accessibility text: a graphic with a light blue background featuring dark turquoise icons of a mother breastfeeding and a baby bottle next to text that reads: “zero to six months: babies need only breast milk or infant formula to get enough fluids and proper nutrition.” At the bottom of the graphic text asking, “Thirsty for more?” is written above a URL www.HealthyDrinksHealthyKids.org. A logo at the bottom left features two horizontal orange bars above and below the words “Healthy Drinks, Healthy Kids.”

6-12 MONTHS

In addition to **breast milk** or **infant formula**, offer a small amount of drinking **water** once solid foods are introduced to help babies get familiar with the taste – just a few sips at meal times is all it takes. It's best for children under 1 not to drink juice. Even 100% fruit juice offers no nutritional benefits over whole fruit.

A campaign logo at the bottom left features two horizontal orange bars above and below the words “Healthy Drinks, Healthy Kids.”

12-24 MONTHS

It's time to add **whole milk**, which has many essential nutrients, along with plain drinking **water** for hydration. A small amount of juice is ok, but make sure it's 100% fruit juice to avoid added sugar. Better yet, serve small pieces of real fruit, which are even healthier.

#accessibility text: a graphic with a light blue background featuring dark blue icon of a water bottle next to text that reads: “2 to 5 years: Milk and water are the go-to beverages. Look for milks with less fat than whole milk, like skim (non-fat) or low-fat (1%). If you choose to serve 100% fruit juice, stick to a small amount, and remember adding water can make a little go a long way!” At the bottom of the graphic text asking, “Thirsty for more?” is written above a URL www.HealthyDrinksHealthyKids.org. A logo at the bottom left features two horizontal orange bars above and below the words “Healthy Drinks, Healthy Kids.”

#accessibility text: a graphic with a light peach background featuring colorful icons of a mother breastfeeding, a baby bottle, a toddler cup, a regular cup and water bottle of a water bottle next to text that reads: “All Kids 5 & Under should avoid drinking flavored milks, toddler formulas, plant-based/non-dairy milks, caffeinated beverages and sugar and low-calorie sweetened beverages, as these beverages can be big sources of added sugars in young children’s diets and provide no unique nutritional value.” At the bottom of the graphic text asking, “Thirsty for more?” is written above a URL www.HealthyDrinksHealthyKids.org. A logo on the left-hand side under the icons features two horizontal orange bars above and below the words “Healthy Drinks, Healthy Kids.”
